

United Nations Development Programme

The Community Recovery & Resilience Facility

CRRF

Project Budget: USD 380,000.00

Project Period: January 2025 – December 2025

IMPLEMENTING PARTNER Disaster management and mitigation unit (DMMU)

COOPERATING PARTNERS The Governments of Demark, Luxemburg and South Korea

TARGETED GROUPS Mambwe District Eastern Province Zambia

Context

The CRRF project strengthens the resilience of communities in Eastern and Southern Africa affected by recurring El Niño Southern Oscillation (ENSO) impacts. As the first phase of a broader recovery facility, it pilots community-driven interventions to inform larger-scale efforts. By actively involving local communities, the project promotes ownership and ensures solutions meet local needs. CRRF addresses Africa's "polycrisis," tackling the interconnected challenges of climate change, economic shocks, conflict, weak governance, and rising poverty to break cycles of vulnerability and insecurity

Overall Objective

Climate-Resilient Infrastructure

Recognizing the vulnerability of essential community infrastructure to climate-related shocks, the project will prioritize the reconstruction of critical facilities such as water points, drainage systems, and irrigation infrastructure

Enhanced Livelihoods

Understanding that economic vulnerability exacerbates the impact of climate shocks, the project will focus on enhancing livelihoods and economic opportunities for vulnerable communities.

Women's Empowerment

Acknowledging the pivotal role women play in community resilience, the project places a strong emphasis on promoting their leadership and participation.

Key Achievements

The project was launched to strengthen resilience, with sites selected based on vulnerability assessments. Key collaborations and trainings were established to build capacity, and implementation is now underway.

The CRRF Project baseline provides an overview of vulnerabilities and capacities in eight wards of Mambwe district, highlighting structural challenges, existing resilience mechanisms, and insights to guide inclusive, gender-responsive, and climate-adaptive programming.

The CRRF Project in Mambwe District focuses on eight wards: Chikowa, Chipapa, Chipako, Kakumbi, Malama, Mnkhanya, Ncheka, and Nsefu, to address diverse community needs and strengthen resilience.
